RF EXPOSURE CONSIDERATIONS FOR LOW POWER CONSUMER WIRELESS POWER TRANSFER APPLICATIONS

FCC ID: 2AFR8F1754A

Requirements:

According to FCC KDB 680106 D01 v03 Section 2(d):

Although categorically excluded from routine RF exposure evaluation, Part 18 devices are not exempted from RF exposure compliance. When exposure concerns arise; for example, due to evolving products and operations, RF exposure evaluation may be requested under the provisions of Sections 1.1307 (c) and (d) to determine compliance. Because of significant variations in design and operating characteristics, the procedures required to evaluate RF exposure compliance for wireless power transfer are considered according to the exposure potentials of individual implementations.

According to FCC KDB 680106 D01 v03 Section 3(c):

For devices designed for typical desktop applications, such a wireless charging pads, RF exposure evaluation should be conducted assuming a user separation distance of 15 cm. E and H field strength measurements or numerical modeling may be used to demonstrate compliance. Measurements should be made from all sides and the top of the primary/client pair, with the 15 cm measured from the center of the probe(s) to the edge of the device. Emissions between 100 kHz to 300 kHz should be assessed versus the limits at 300 kHz in Table 1 of Section 1.1310: 614 V/m and 1.63 A/m. A KDB inquiry is required to determine the applicable exposure limits below 100 kHz.

Table 1—Limits for Maximum Permissible Exposure (MPE)

| Frequency range (MHz) | Electric field strength (V/m) | Magnetic field strength (A/m) | Power density (mW/cm ²) | Averaging time (minutes) | | |
|---|-------------------------------|-------------------------------|-------------------------------------|--------------------------|--|--|
| | (A) Limits for Oc | cupational/Controlled Ex | xposure | | | |
| 0.3-3.0 | 614 | 1.63 | *100 | 6 | | |
| 3.0-30 | 1842/f | 4.89/f | *900/f ² | 6 | | |
| 30-300 | 61.4 | 0.163 | 1.0 | 6 | | |
| 300-1,500 | | | f/300 | 6 | | |
| 1,500-100,000 | | | 5 | 6 | | |
| (B) Limits for General Population/Uncontrolled Exposure | | | | | | |

| 0.3-1.34 | 614 | 1.63 | *100 | 30 |
|---------------|-------|--------|---------------------|----|
| 1.34-30 | 824/f | 2.19/f | *180/f ² | 30 |
| 30-300 | 27.5 | 0.073 | 0.2 | 30 |
| 300-1,500 | | | f/1500 | 30 |
| 1,500-100,000 | | | 1.0 | 30 |

f = frequency in MHz * = Plane-wave equivalent power density

Test Setup:

Measurements were performed at 15cm away from the EUT. EUT was setup to run in normal operation with continuous transmission. Electric and magnetic field probe was placed 15cm away

from the EUT and electric field and magnetic field were measured. Measurements were taken on all side of the EUT. The time average used from the measurement was 6 minutes. Measurements were performed on two models: horizontal model and vertical model. Please refer the setup photos.
